What is a Continuum Fund?

The asset mix for each Continuum Fund is the result of extensive research incorporating investment risk and return relationships and correlation analysis. The asset mix was developed using independent optimization software. Continuum Funds provide diversification among:

- Asset classes such as stocks, bonds, mortgages and real estate.
- Types of asset classes such as stocks in large, small, or resource-based companies and bonds issued by governments and corporations.
- Assets in different countries such as Canada, the U.S. and other parts of the world.
- Different investment advisors with different investment styles.

The composition of the Continuum Funds may be reviewed annually. Either the target investment percentages, the number of underlying Funds or the underlying Funds themselves may change.
